

Effect of Temperature On Sago Pondweed Growth

(Between Tank Experiment)

Grade Levels:

6-8

Subject Areas:

Biology, Botany,
Environmental Science,
Marine Biology

Duration:

6-8 weeks, 1-2 hours initially,
5-10 minutes per day
thereafter

Skills:

Problem solving, organizing,
interpreting, communicating
information

Summary

Will changing the temperature of the growth chambers affect the sago pondweed plants' growth? Students set up two chambers with different temperatures and measure the plants to compare their growth over the duration of the project (several weeks).

Maryland State Assessment Outcomes

Nature of Science: Students will demonstrate the ability to interpret and explain information generated by their exploration of scientific phenomena.

Processes of Science: Students will demonstrate the ability to employ the language, instruments, methods, and materials of science for collecting, organizing, interpreting, and communicating information.

Math - Statistics: Collect, organize, and display data.

Maryland State Assessment

Indicators

Nature of Science: Generate a consensus based on data.

Processes of Science: Demonstrate the following: controlling variables, conducting an experiment, and drawing conclusions. Communicate experimental procedures and findings orally and in writing.

Math - Statistics: Collect, organize, display, and interpret data for a given situation using appropriate displays. Use data analysis to write an evaluative argument in a real life situation.

Materials

Per class/group of several classes:

One "Bay Grasses in Classes" standard growth kit

Making Connections

You are growing bay grass to plant in the Chesapeake Bay to restore habitat for many bay creatures. Temperature varies throughout the year. You will simulate the growing conditions of the Chesapeake Bay in growth chambers and determine which is the best temperature for growing sago pondweed.

Background

Refer to the Sago Pondweed Fact Sheet Lesson for background information about sago pondweed. Visit the Bay Grasses in Classes website at <http://www.dnr.state.md.us/bay/sav/bgic/> for additional background information.

Procedure

Set up the Bay Grasses in Classes growth chambers as instructed in the protocol, labeling one chamber "A". This chamber will have the heater set at 75 °F (24 °C). Label the other chamber "B" and set up the heater for 84 °F (29 °C) or 92 °F (33 °C). See diagram below.

Record the growth of the sago pondweed weekly on the Data Log(Page 22 in protocol). Follow the protocol directions for all other procedures (water addition, and water quality tests).

****The teacher should fill out the "Experiment Diagram and Growth Chamber Set-up" form and the "Initial Water Quality Data" form(pages 21 and 23 in protocol)and fax it to DNR at the time that you set up the chambers.**

**** To submit data each week, teachers should go to the on-line data entry page at <http://mddnr.chesapeakebay.net/bgic/loginindex.cfm> . If there are any problems with entering your data on-line, please fax your data sheet to Maryland DNR at 410-260-8859.**

Assessment/Evaluation

- 1) Students should complete the Pre-lab and Post-lab Activities included in this binder. Students will compare the growth rates of the redhead grass plants in the two chambers by creating a line graph of their data. Students will also draw a conclusion of their experiment.

2006 Bay Grasses in Classes: Sago Pondweed Data Log

School: _____

Teacher: _____

Grade/Class: _____

Week# 1 2 3 4 5 6 7 8 9 10 11 12 13 14
(Week 1 = when germination is first noticed)

Experiment Type: Temperature

Chamber Type: (circle one)

75°F / 24°C

84°F / 29°C

92°F / 33°C

(black ink only please)

<i>Daily Monitoring</i>					
Date (month/day)	Water Temp (°C) (°F)		Water Depth (fill to 6 1/2")	Light Height (should be 10")	Comments (Date plants first visible, heavy algal growth)
Monday _____					
Tuesday _____					
Wednesday _____					
Thursday _____					
Friday _____					
Average Temp:					

Weekly Monitoring

Date	Average Temperature	pH	Nitrate (ppm)

Plant Height (centimeters)					
Growth Chamber A or B (indicate chamber type)					
Date	Tray 1	Tray 2	Tray 3	Tray 4	Average

NOTE: Please use the on-line data entry system to enter your data. If you can not access the internet, fax this page to Maryland DNR c/o Mark Lewandowski 410-260-8859 at end of each week.
